The MGT Torque Gauge is an economical solution for most basic torque measurement applications. A dedicated remote torque sensor with a Jacobs chuck can be used to grip a sample, bit, or fixture. The gauge's rugged reversible aluminum housing allows for hand-held use or test stand mounting. Three pushbuttons allow the user to easily select units of measurement, reset zero, and recall clockwise and counterclockwise peak torque values. The MGT is compatible with Mark-10 torque test stands, and is available in capacities from 10 ozFin to 100 lbFin.
